Alerting Abstract: JP A

NOVELTY - A thermal transfer recording layer (3) containing fluorescent material, color pigment and binder resin is formed on a support layer (2). The fluorescent material emits light when irradiated with ultraviolet or infrared rays.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for image formation method. The thermal transfer recording layer is thermally transferred on an image receiving sheet by thermal head printer and image formation is carried out by area gradation.

USE - For identity cards and passports.

ADVANTAGE - Light resistance and security properties are improved.

ADVANTAGE - DESCRIPTION OF DRAWING(S) - The figure shows sectional view of thermal transferring medium. (1) Thermal transfer medium; (2) Support layer; (3) Thermal transfer recording layer.

International Classification (Main): B41M-005/30 **(Additional/Secondary):** B42D-015/10
